

MACHINE LEARNING

Q1 to Q11 have only one correct answer. Choose the correct option to answer your question.

1. Movie Recommendation systems are an example of:

- i) Classification
- ii) Clustering
- iii) Regression

Options:

- a) 2 Only
- b) 1 and 2
- c) 1 and 3
- d) 2 and 3

**Answer. d) 2 and 3**

2. Sentiment Analysis is an example of:

- i) Regression
- ii) Classification
- iii) Clustering
- iv) Reinforcement

Options:

- a) 1 Only
- b) 1 and 2
- c) 1 and 3
- d) 1, 2 and 4

**Answer. d) 1,2 and 4**

3. Can decision trees be used for performing clustering?

- a) True
- b) False

**Answer. True**

4. Which of the following is the most appropriate strategy for data cleaning before performing clustering analysis, given less than desirable number of data points:

- i) Capping and flooring of variables
- ii) Removal of outliers

Options:

- a) 1 only
- b) 2 only
- c) 1 and 2
- d) None of the above

**Answer. a) 1 only**

5. What is the minimum no. of variables/ features required to perform clustering?

- a) 0
- b) 1
- c) 2
- d) 3

**Answer. b) 1**

---

## MACHINE LEARNING

6. For two runs of K-Mean clustering is it expected to get same clustering results?
- a) Yes
  - b) No

**Answer. Yes**

7. Is it possible that Assignment of observations to clusters does not change between successive iterations in K-Means?
- a) Yes
  - b) No
  - c) Can't say
  - d) None of these

**Answer. a) Yes**

8. Which of the following can act as possible termination conditions in K-Means?
- i) For a fixed number of iterations.
  - ii) Assignment of observations to clusters does not change between iterations. Except for cases with a bad local minimum.
  - iii) Centroids do not change between successive iterations.
  - iv) Terminate when RSS falls below a threshold.
- Options:
- a) 1, 3 and 4
  - b) 1, 2 and 3
  - c) 1, 2 and 4
  - d) All of the above

**Answer. d) All of the above**

9. Which of the following algorithms is most sensitive to outliers?
- a) K-means clustering algorithm
  - b) K-medians clustering algorithm
  - c) K-modes clustering algorithm
  - d) K-medoids clustering algorithm

**Answer. a) K-means clustering algorithm**

10. How can Clustering (Unsupervised Learning) be used to improve the accuracy of Linear Regression model (Supervised Learning):
- i) Creating different models for different cluster groups.
  - ii) Creating an input feature for cluster ids as an ordinal variable.
  - iii) Creating an input feature for cluster centroids as a continuous variable.
  - iv) Creating an input feature for cluster size as a continuous variable.
- Options:
- a) 1 only
  - b) 2 only
  - c) 3 and 4
  - d) All of the above

**Answer. d) All of the above**

11. What could be the possible reason(s) for producing two different dendrograms using agglomerative clustering algorithms for the same dataset?
- a) Proximity function used
  - b) of data points used
  - c) of variables used
  - d) All of the above
-

## MACHINE LEARNING

**Answer. d) All of the above**

Q12 to Q14 are subjective answers type questions, Answers them in their own words briefly

12. Is K sensitive to outliers?

**Answer.**

Yes k\_means algorithm updates the cluster centers by taking the average of all the data points that are closer to each cluster center. When all the point are packed nicely together, the average makes sense. However when you have outliers, this can affect the average calculation of the whole cluster. As a result this will push your cluster center closer to the outliers

13. Why is K means better?

**Answer**

K-means is the one of the important algorithm which uses unsupervised learning method to solve known clustering issue of. It works really well with large data sets and it will help to save cost of the project and guarantee convergence

14. Is K means a deterministic algorithm?

**Answer**

No.k means clustering is based on a non-deterministic algorithm.This means that running the algorithm several times on the same data, colud give different results
